Successor to the Ultrasone HFI-780

The PRO 780i Headphones are the successor to the HFI-780 Headphones and are known for their tonal qualities. This gives the PRO 780i the balanced, even, and precise sound of its predecessor. The tight bass reproduction of the 40mm drivers combines with the clear treble of the gold diaphragm to create a very special listening experience. The headphones combine a closed capsule principle with the tonal qualities of the open design.

Comfort on a Professional Level

The PRO 780i's wearing comfort has been improved. The padding is designed for extensive listening sessions and can be conveniently worn on the head for a long time without pressure. In addition, the PRO 780i comes with two different earpads to choose from. Whether you prefer faux leather or velour as the surface material for your ear cushions, the PRO 780i offers you both options.

Full Frequency Range

The PRO 780i represents the entire frequency range audible by humans and its range goes beyond the limits of human hearing. The bass goes down to 10 Hz and the highs go up to 26 kHz. This ensures that your headphones will reproduce any frequency range, and you can fully enjoy your music. In professional applications, you can count on the fact that you can assess the entire frequency range in detail.

S-Logic Plus Technology

This technology combines precision dampening with micro-acoustic reinforcement, allowing driver, buffer-board, and spatial parameters to complement one another in an optimal manner. The redesigned earcups of the headphones and their tonal fine-tuning result in a neutral sound impression with more vivid perception of voices and instruments.

Ultrasone PRO 780i Specs

Headphone

Foldable	Yes
