Cena: **109,00** EUR

IMPACT LX+ CONTROLLER KEYBOARD

The 49 or 61 note velocity sensitive keyboard is a synth action with a medium tension. The full-size, piano-style keys are covered to protect against dirt and dust while also complementing the Impact LX+ design. With 4 velocity curves gradually increasing in dynamics there is a choice for any playing style. If you don't need velocity, 3 fixed velocity levels cater for a consistent output. Octave and transpose buttons as well as pitch bend and modulation wheels are within reach, so you can quickly shift the keyboard up or down as needed, or apply additional articulation with the wheels.

OCTAVE & TRANSPOSE BUTTONS

There is more to the 4 Octave & Transpose buttons than meets the eye. 4 functions are selectable on the fly so you can make important changes at any time, even while you play. A key combination makes assignment quick and easy. Choices include sending out MIDI Program Messages, change the Global MIDI Channel or select any of Impact LX+'s 5 user presets with either the Octave or Transpose buttons.

CONTROL CENTER

Nine 30mm faders, 9 MIDI buttons and 8 encoders are at the center of Impact LX+'s control panel. Each control is fully programmable to send any MIDI CC message for use with hardware or software MIDI products. Used with Nektar DAW integration, the controls take on a life of their own, providing flexible pre-mapped DAW control giving you the best of both worlds. Control settings can be stored in any of the 5 Impact LX+ presets for recall at any time. And if you switch Null on, any parameter values are stored when you change presets so you avoid parameter jumping.

CONTROL CENTER

Control settings can be stored in any of the 5 Impact LX+ presets for recall at any time. And if you switch Null on, any parameter values are stored when you change presets so you avoid parameter jumping.

PADS

For groove and beat creation, Impact LX+'s 8 velocity sensitive pads make life easy. Calibrated to trigger at a light touch, finger drumming is suddenly well within reach with a nice and even velocity response. Each pad can be assigned any MIDI note number or MIDI cc message for use as MIDI trigger or toggle

buttons. But the best part is the "Pad Learn" feature, which allows you to just select a pad, play the note or drum sound you want on the keyboard and assignment is done. No complex menus for a task that's essential to getting the most out of your pads. Assignments are stored over power cycling so you don't lose your settings when you switch your system off for the night. In addition, 4 pad map locations can store your settings for future recall.

NEKTAR DAW INTEGRATION

Impact LX49+ and LX61+ software integration supports most of the popular DAWs. A common workflow gives access to many of the functions you are most likely to need when recording and performing with your Impact LX+. The best part is that it's all done for you: Simply complete the installation process and start making music! Impact LX+ DAW integration currently supports Cubase, Digital Performer, FL Studio, Garageband, Logic, Nuendo, Reaper, Reason, Sonar and Studio One. Buttons and controls are labeled so you don't have to remember how they are assigned. That's why Impact LX+ is a breeze to use but with enough extra features under the hood to challenge even the most experienced power user.
